Aims of this Subject

This unit focusses on the front-end of project management by explicating the tasks and decisions that are necessary for the delivery of innovative outcomes. The unit provides students with an understanding of how project management can mitigate uncertainties associated with the development of innovative opportunities. The appropriateness of various project management frameworks is thoroughly discussed and applied to multiple innovation contexts. This unit also examines how different project management approaches can be combined to navigate the innovation landscape.

PRM60002 – Unit Learning Outcomes

Students who successfully complete this unit will be able to:

1. Apply critical and advanced knowledge of project management to the innovation context
2. Critically evaluate the role of interdisciplinary teams and key stakeholders in supporting projects and operations within an enterprise
3. Critically analyse business development and capacity management in response to environmental changes
4. Communicate proficiently project management plans that meet the needs of innovation contexts
5. Apply advanced and coherent knowledge to an applied research project using project management practice within an innovation context

Teaching Method

- Flipped Method

Pre-work includes

- Cases Study 2-page readings or less

In-Class work

- Games
- Case Study Elaborations/Discussions
- Team-based knowledge testing using Online Polls

PRM60002 Assessment Tasks

Guidance for Using AI

You should view AI as a digital technology to assist you. To guide your AI usage as a helpful digital technology, let us improve our understanding of digital technology in the following way:

•*'a digital object becomes a digital technology when it is assigned a meaning, namely a purpose for applying it, whereby the purpose is determined by social actors'* Hund et al. (2021): p. 5).

•For your assignment completion, a student is the social actor, and your ability to get effective help from AI is determined by your PURPOSE. Use the instructions below ito get the clarity and specificity you need to get effective output from AI.

AI and AI-assisted writing technologies for assignments

There is no restriction or requirement on the use of AI in this unit but whatever you choose to do, you need to clearly state that as per the relevant assignment rubrics and the guidelines below:

1. Disclosure and Transparency:

- Students must clearly disclose any use of AI or AI-assisted writing technologies in their assignments. This includes acknowledging the specific tools employed and their contribution to the assignment.
- Transparency is key. Students should articulate the extent to which AI or AI-assisted technologies were utilized and the impact they had on the assignment's creation process

2. Originality and Academic Integrity:

- All assignments must maintain academic integrity and uphold standards of originality. While AI and AI-assisted writing technologies can aid in generating content, students are responsible for ensuring that their work is their own and properly attributed when utilizing external sources.
- Plagiarism, including the direct copying of AI-generated text without proper attribution, is strictly prohibited and will result in disciplinary action.

AI and AI-assisted writing technologies for assignments

3. Understanding and Learning:

- The use of AI and AI-assisted writing technologies should complement students' learning objectives and deepen their understanding of course material. These tools are meant to support learning, not replace critical thinking or independent analysis.
- Students are encouraged to engage with the AI-generated content critically, evaluating its relevance, accuracy, and appropriateness within the context of their assignments.

Artificial Intelligence (AI) and AI-assisted writing technologies have become increasingly prevalent in academic settings, including completing assignments. While these tools offer significant benefits in enhancing productivity, improving writing quality, and facilitating research, ensuring their ethical and responsible use is essential. This policy outlines guidelines and expectations regarding the utilization of AI and AI-assisted writing technologies for assignments within the PRM60002 course.

The PRM60002 Policy on the Use of AI and AI-assisted Writing Technologies for Assignments aims to promote responsible and ethical utilization of these tools in academic settings. By adhering to the outlined guidelines, students can leverage AI technologies effectively while upholding the principles of academic integrity, originality, and ethical conduct.

Assignment 1: 30% of your total mark - 3,000 WORDS (+- 500 words)

Written Report (30%)

- The aim of this assignment is to apply the project management approaches to manage the fuzzy front end of an innovative idea and/or to address the creation of an enterprise/venturing of an enterprise into a new market or augment existing market by establishing the feasibilities of planned innovations. Specifically, you are required to:
  - Develop expertise on an issue that is broad in scope and complicated in nature.
  - Uncover hidden needs and deep insights that give a unique perspective on the problem.
  - Reframe the problem into a clearer and actionable detail that will inspire implementable solutions.
  - Analyse and plan the enterprise creation and/or business growth

You are required to develop an innovative opportunity/business problem by answering succinctly the following questions:

Opportunity identification, development & exploitation

- What "business problem" or challenge are you facing and/or trying to solve?
- What idea(s) do you have to address this problem?
- What industry or sector of the economy are you addressing? Why is this market attractive?
- What is the value proposition of your business idea?
- Who your target customer is? How do you envisage the revenue stream?
- Why do you think that the targeted customer segment would opt for your product/service?
- How would you validate that your idea works? Establish the feasibility of your business idea by determining market, technical and financial feasibilities
- How project management has enabled you to develop this opportunity thus far and what is its role in exploiting this opportunity further?
- What project management approaches would be appropriate in meeting the challenges of delivering this opportunity?

Internal

- **Assignment 1 i**s an individual assignment
- As a group you need to agree which is the ”best” idea and develop that for the Group Project – **Assignment 3**

Assignment 3: - worth **40%** of your total mark

(*Normally, 3 to 5 students) – 2500 (+/- 500) Words

- Assignment 3 has two deliverables:
  - Video Presentation – 10%
  - Business Report – 30%
- In Assignment 1, you developed business ideas by employing the adaptive project management approaches to manage the fuzzy front ends of entrepreneurial ventures. The improved understanding of your business idea now would pave way for the project management to either develop or scale up your product or service offerings or transition to operations. Specifically, you are required to prepare a business report that justifies and gives the implementation details of your entrepreneurial venture. **You are also required to inform your project plan with the academic literature or/and industry frameworks.**

Develop a project plan

Develop a project plan: You are expected to develop a project plan for the idea that you developed in Assignment 1. The project plan should consist of (at minimum) the following:
•Scope
•Schedule and Network Analyses
•Resources
•Risk
•Justification for the chosen project management methodology
•Stakeholder management, Project team Structure and capability

Assignment – Research Essay:

Research Report – 3,000 words (30% of your final mark)

You are required to source at least 10 quality academic journal papers and write a report to answer the following research question:

- 1. Why and how agile projects contribute to innovative outcomes?

OR

- 2. How to design/implement a hybrid adaptive/traditional PM methodology to deliver incremental and radical innovative outcomes.

Please note that traditional project management is also known as stage gate, waterfall or predictive project management. The adaptive project management is also known as agile project management, agile development and agile innovation

DUE DATES*

- All Due Dates are on CANVAS
- All assessments rubrics are also provided on the Canvas to guide you on the expectations.
- **These are strict deadlines and extensions may only be granted in compelling personal circumstances and it may involve formal approval from the Student Progress Team at the FBL.**
